# INTRODUCTION

## ABOUT US

Established in 1990, **Amulya Industries** is a leading manufacturer of pharmaceutical equipment, machinery, and laboratory models. With over three decades of industry experience, we provide end-to-end solutions for pharmaceutical production from processing to packaging driven by innovation and cutting-edge technology.

Our offices are located in **Mumbai** and **Navi Mumbai**, while our manufacturing units are based in **Gujarat** and **Mumbai**, allowing us to efficiently meet both domestic and international demands.

## PRODUCT RANGE

We specialize in the manufacturing of:

- Tablet, Capsule & Powder Processing Machines
- Granulation Equipment
- Ointment Manufacturing Equipment
- Liquid Processing Machinery
- Aerosol Filling and Packaging Systems

Our product range is widely used in R&D, pilot plants, turnkey projects, and full-scale pharmaceutical production facilities.

## CLIENTELE

Our reputation for excellence has earned us a trusted spot among top pharmaceutical companies. Our valued clientele includes:

**Cipla, Jubilant Organosys, Glenmark, Eris Lifesciences, Ranbaxy, Clean Science Fino Chemicals, PDPL, Medicamen Biotech, Panchvati Prayogshala, Intermed Pharma, Pro Labs, Endo Labs, Golden Cross Pharma, Vibro Pharma, G Amphray Labs, Prashi Pharma, Modhike Pharma.**

In addition, we are a preferred manufacturing partner for many pharmaceutical exporters, serving as a reliable source for their global client requirements.

## GLOBAL PRESENCE

We have successfully established a strong presence in international markets. Our products are exported to **Nepal, Jordan, Iran, Saudi Arabia, Bangladesh, and multiple African countries**. Our global network is a reflection of our commitment to quality, reliability, and customer satisfaction.

## WHY CHOOSE US?

- Over 30 years of expertise in pharmaceutical machinery
- Complete solutions from processing to packaging
- Trusted by top pharma companies and global exporters
- Precision manufacturing with strict quality control
- Customized machines built to client specifications
- Responsive after-sales service and technical support
- Proven reliability across 10+ international markets.

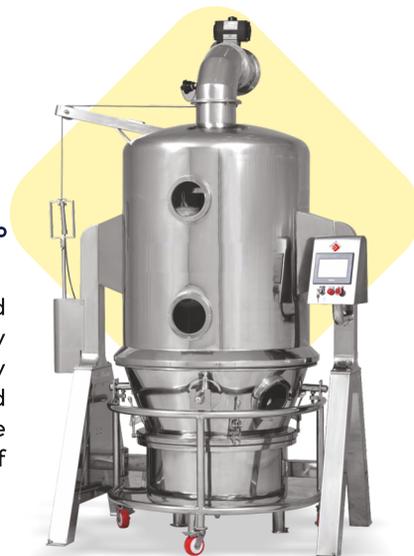

# OUR PRODUCTS

## Fluid Bed Dryer

It is ideal for heat sensitive and non-heat sensitive products in Pharmaceuticals, Chemicals and Biochemical, Food and Dairy Industries.

Fluid Bed Dryer Process involves fast drying and cooling. The Fluid Bed Dryer have a bed of solid particles which are fluidized by passing flow of air upward through a specially designed double woven screen. The upward velocity of air is so maintained so as to slightly lift the solid particles and set them in motion. This motion can be utilized to bring forward movement of the solids particles. The air is heated and the process hot air evaporates the fluid and dries the solids. The uniform drying is achieved by exposing the full surface of every particles of the solid mass to the incoming high velocity hot air.

## Double Cone Blender

Ideal for mixing, lubricating and blending in Pharmaceutical, Nutraceutical, Food, Chemical, Cosmetics, Ceramics, Pesticide, Plastics and other Allied Industries

Double cone blender is an efficient and versatile machine for mixing of dry powers and granule homogeneously.

The Double Cone Blenders have conical shape at both ends to enable uniform mixing and easy discharge. It can perform homogeneously dry mixing of free flowing powders, granules requiring low shearing force, Mixing and Blending of particles with rapid intermixing of particles irrespective of varying specific gravities. The material is loaded into the double cone blender drum. The double cone blender tumbles the material in the container and spread out.

## Octagonal Blender

Ideal for mixing, lubricating and blending in Pharmaceutical, Nutraceutical, Food, Chemical, Cosmetics, Ceramics, Pesticide, Plastics and other Allied Industries

The unique shape of Octagonal blender, a combination of octagonal and "V" shape provide to process larger volume in less space compared to similar blender like "V" and double cone blender. It can perform homogeneously dry mixing of free flowing powders, granules requiring low shearing force, Mixing and Blending of particles with rapid intermixing of particles irrespective of varying specific gravities. The material is loaded into the blender drum. The octagonal blender is tumbles the material in the container and spread out. The mixing is achieved in 5 to 30 minutes with better homogeneity depending on type of material.

# OUR PRODUCTS

## Multi Mill (Belt Drive)

Ideal for Pharmaceuticals, Chemicals, Cosmetics, Ceramics, Colours, Dyestuff, Food products etc. It also finds application in Pesticides, Fertilizers, Spices, Detergents, Insecticides, Plastics and Resins industries

**Dumra's** Fluid Bed Dryer Process involves fast drying and cooling. The Fluid Bed Dryer have a bed of solid particles which are fluidized by passing flow of air upward through a specially designed double woven screen. The upward velocity of air is so maintained so as to slightly lift the solid particles and set them in motion. This motion can be utilized to bring forward movement of the solids particles. The air is heated and the process hot air evaporates the fluid and dries the solids. The uniform drying is achieved by exposing the full surface of every particles of the solid mass to the incoming high velocity hot air.

## Paste Kettle

Ideal for paste / binder preparation for RMG Mixing Process.

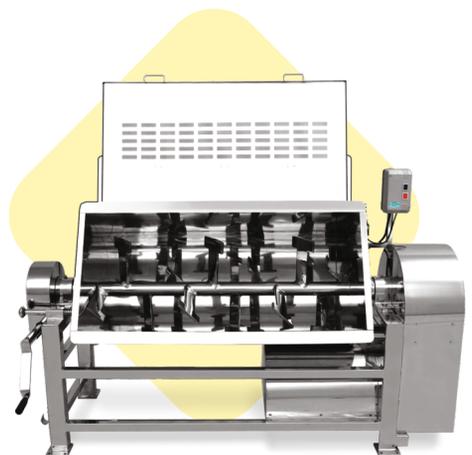

The paste kettle is designed for preparing paste/starch/binder solution for tableting formulation and granulation. The kettle has a small cylindrical top shell with a spout for pouring out binder mass. It is provided with Anchor type beater for paste mixing.

## Mass Mixer

Ideal for Pharmaceuticals, Food & Herbals Powders, Agro Chemicals & Chemicals.

The **Mass Mixer** is designed for efficient and homogenous mixing of dry and wet material and especially suitable for powder of Pharmaceuticals, Food, Herbals, Agro Chemicals & Chemicals. The mass mixer consists of a rigid fabricated structure motor, gear box, mixing drum, paddle type blades and tilting device. Specially designed sealing arrangement is provided to ensure that no black particle enters into the mixing drum. The material under mixing process can be monitoring through dust cover and its controls dusting and contaminations. The tilting device is provided to make easy the unloading of the material and easy cleaning of the mixing drum.
