## Shower Features:

Rubit Technology

Multi Flow Options

Variety of Shapes & Sizes

Thermo Insulation

Flow with Air Mixing

Ultra-slim Rain Showers

## USER GUIDELINES FOR THE OPTIMUM PERFORMANCE OF THE Eauset PRODUCTS:

- Keep the number of bends in the pipelines to a minimum. More than required number of bends throttle the pressure of water.
- All the supply line must have vent pipes. These vent pipes help in removing air-locking in the water supply to give a smooth flow of water from the bath fittings. Test the working of all concealed fittings installed on a high pressure for leakage before plastering or fixing of tiles.
- Clean the aerator provided in the items at regular intervals for a perfect foam flow of water from fittings.
- Clean the fittings regularly with soap or chalk powder to remove scaling/stains. Do not use strong detergents as this may cause damage to the chrome finish provided in all fittings.
- Place the outlet point in the overhead tank at least 25cm above the bottom level of water tank. This prevents the flow of foreign particles, sand etc. along with water supply into the fittings and thereby preventing the possible damage to the working parts.
- To protect the fine finish of fittings from dirt, stains and other damages, cover them with cloth or poly pack after their installation till they come into actual use.
- Please buy Eauset products from company's authorised distributors or dealers to ensure genuine quality products. Also please follow the instructions manual provided with the individual product.
- The supply must be clean at all times to avoid any damage to the fittings also water tanks shall be cleaned time to time.
- Always repair / install by qualified person. Always use original Eauset spare parts and also never alter the fitting in any manner unless previously authorized in writing by Eauset.
